

AirFlex™ with PrecisionFinish™

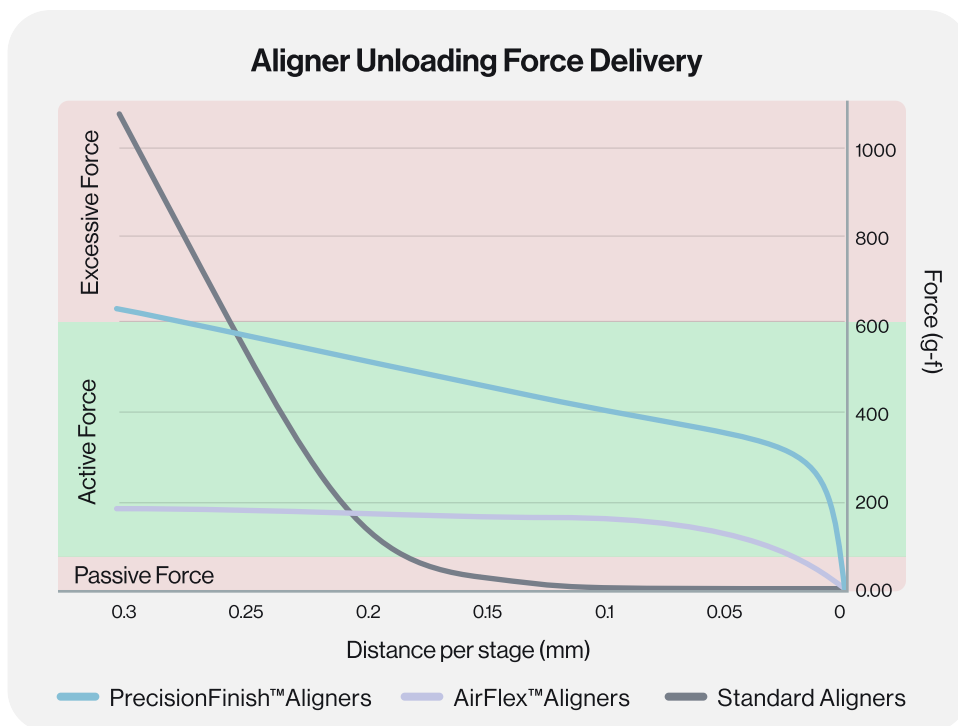

Innovation designed for precise control in the finishing phase

AirFlex with PrecisionFinish is made with a proprietary material designed for the precise detailing needed to achieve optimal alignment and aesthetics during the final stages of treatment.

TruForce™ Delivery per aligner stage

PrecisionFinish Aligners are designed to deliver optimal forces throughout the finishing phase. They provide sustained force control, which is required for final detailing and function. In contrast, standard aligners apply excessive force that diminishes quickly, becoming passive soon after insertion. This lack of control is a key factor contributing to the excessive refinements seen in competing systems.

*PrecisionFinish Aligners will be included in all cases – last 4 stages for AirFlex Full or last 2 stages for AirFlex 10.

**FDA-cleared for at least 9-12 hours of continuous daily wear.
